

Supply Chain & Inventory Optimization

Power BI Analytics Report:

1: Executive Summary:

The Supply Chain & Inventory Optimization dashboard provides a comprehensive view of inventory performance, sales trends, stock health, and profitability across warehouses and product categories. The objective of this solution is to reduce stockouts, minimize overstock, optimize working capital, and improve supply chain efficiency.

Key KPIs indicate:

- Total Sales: **1.05bn**
- Total COGS: **734.44M**
- Inventory Value: **193.68bn**
- Profit: **315.68M**
- Stockouts: **16**
- Sell-Through Rate: **0.67%**

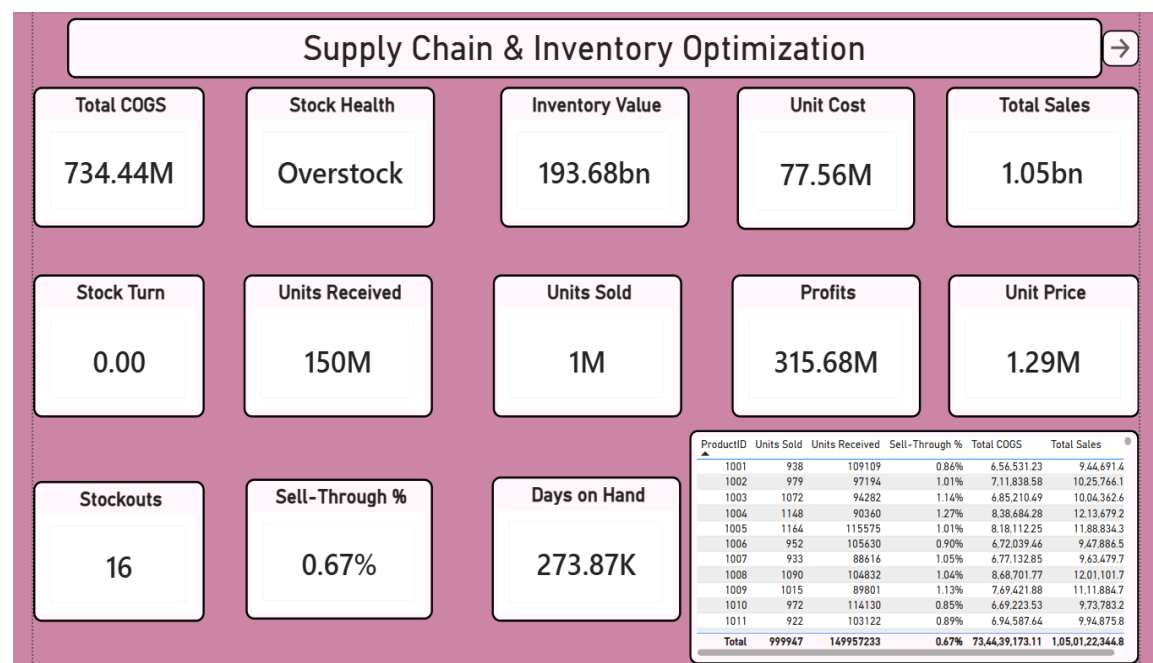

The current overall stock health status indicates Overstock, suggesting excess inventory relative to demand.

2: KPI Performance Overview:

This page highlights key financial and operational metrics:

- Total COGS
- Inventory Value

- Total Sales
- Unit Cost
- Units Sold & Units Received
- Profit
- Stock Turn
- Sell-Through %
- Days on Hand

Observations:

- Units Received (150M) significantly exceed Units Sold (1M), indicating potential over-purchasing.
- Sell-Through Rate is very low (0.67%), confirming excess stock.
- Stock Turn is currently low, showing slow inventory rotation.
- Days on Hand is extremely high (273.87K), further confirming overstock conditions.

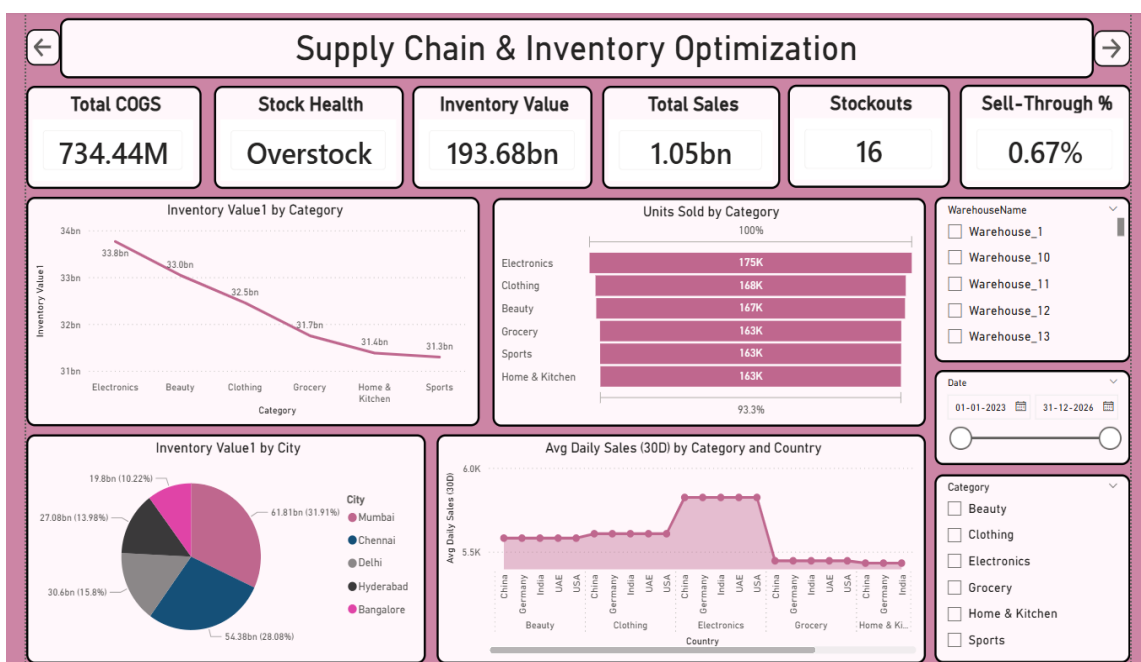

Business Insight:

Inventory capital is locked, and procurement strategy requires optimization.

3: Inventory Overview Analysis:

This page provides a macro view of:

- Inventory Value by Category
- Units Sold by Category
- Inventory Value by City
- Average Daily Sales (30D) by Category and Country

Key Findings:

- Electronics holds the highest inventory value.
- Mumbai contributes the largest share of inventory.
- Electronics and Clothing are top-selling categories.

- Average daily sales show variation across countries, indicating geographic demand differences.

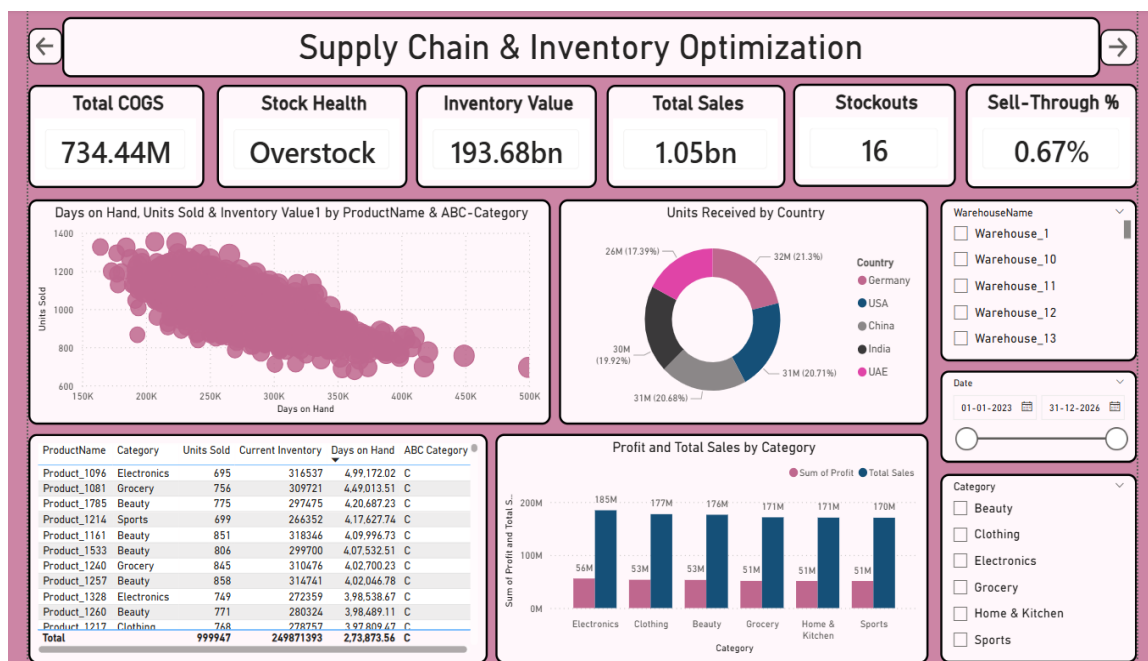

Insight:

Inventory allocation may need regional balancing.

4: Inventory Health Analysis:

This page evaluates product-level health using:

- Scatter plot: Days on Hand vs Units Sold
- ABC Classification
- Stock Health indicators
- Detailed product table

Findings:

- Majority of products fall into Category C.
- Many products show high Days on Hand with moderate sales → Overstock risk.

- A-category items require tighter replenishment control.

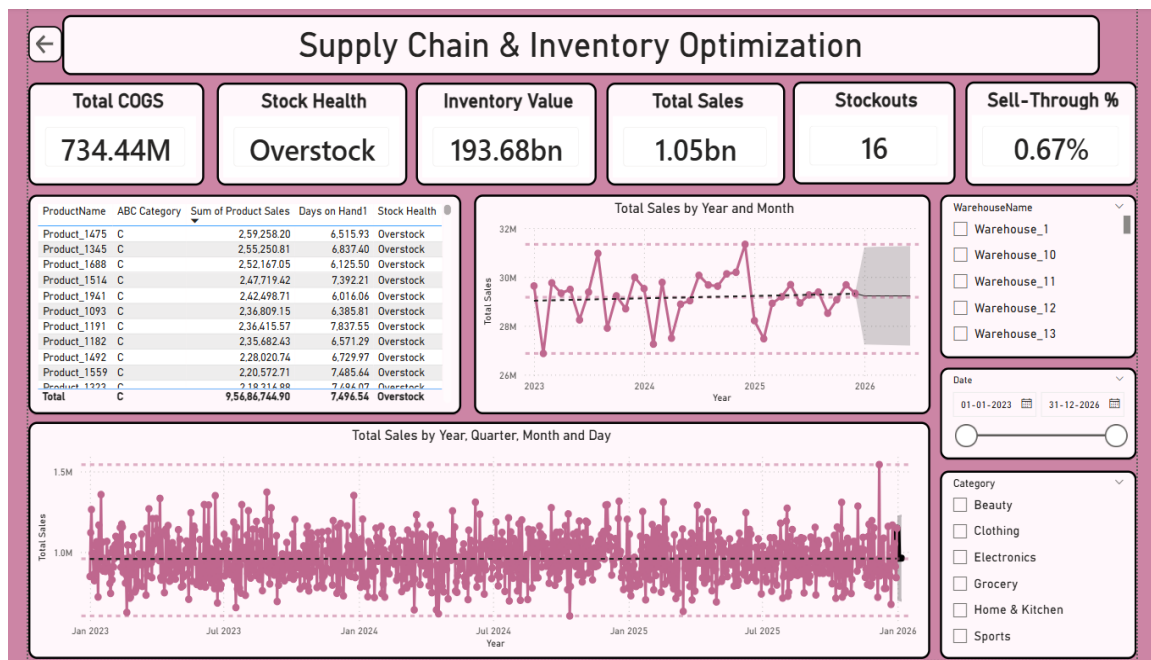

Insight:

ABC-driven replenishment policies should be implemented.

5: Sales Trend & Forecast Analysis:

This page analyzes:

- Monthly Sales Trend
- Yearly Sales Patterns
- Power BI Forecasting

Forecast Insights:

- Sales trend shows moderate growth.
- Future demand appears stable.
- Inventory levels exceed forecasted demand.

Recommendation:

Adjust procurement to match forecast demand.

6: Profitability & Category Analysis:

This page evaluates:

- Profit by Category
- Total Sales by Category
- Unit Price & Cost Analysis

Findings:

- Electronics generates highest sales.
- Profit margins are stable but could improve through better inventory turnover.
- Certain categories may require pricing adjustments.

Insight:

Profit optimization should align with inventory rationalization.

7: Strategic Recommendations & Conclusion:

Based on the complete dashboard analysis:

1. Reduce Overstock:

- Pause purchase orders for slow-moving items.
- Rebalance inventory across warehouses.

2. Improve Sell-Through:

- Implement targeted promotions for C-category products.
- Optimize pricing strategy.

3. Strengthen Forecast-Based Planning:

- Align procurement with forecasted demand.
- Use 30-day average sales for reorder logic.

4. Implement ABC-Based Inventory Control:

- A-products: Tight monitoring.
- B-products: Moderate review.
- C-products: Clearance or discount strategy.

Conclusion:

- The Supply Chain & Inventory Optimization dashboard provides a comprehensive view of inventory performance and demand trends.
- The analysis highlights significant overstock conditions driven by low sell-through and slow stock turnover. ABC classification and Days on Hand metrics enable better product prioritization and replenishment planning.
- Forecast insights support proactive procurement and inventory balancing decisions.
- Overall, the solution empowers data-driven supply chain optimization and improved working capital efficiency.
